

Immersive Virtual Reality is a newly created technology that aims to fully immerse oneself into the computer generated world. Immersive VR with HMD uses Head-Mounted Display (HMD) technologies to project VR directly in front of your eyes, allowing users to focus without distraction. A magnetic sensor detects head motion, reshaping the virtual world.

My opinion on technology is complex, a part of me dislikes the jobs that will be taken by A.I., the gut-wrenching thought of A.I. taken over, the chance that us humans will become too profound in technology and have it slowly corrupt us. But the other part of me is excited for the new kinds of beauty and entertainment that will come from this, and the chance that nothing bad will happen at all, that technology will only uplift us.
